

Didactic Innovations

Digital Technologies & Corporate Education

Job Offer

Software Developer „Digital Learning Solutions“

As a spin-off of the two universities of Osnabrück and Saarbrücken, Didactic Innovations GmbH designs innovative education and training scenarios for the company of the future. We design and digitize modern teaching and learning formats and form them into a new combination of didactics and technology – or in one concept: Didactic Innovations. Among our customers, we count well-known multinational companies.

We are looking for software developers (m/f/d) for support in designing and implementing digital learning systems.

Tasks

- Designing and Implementing digital teaching and training applications with recent UI/UX concepts
- Evaluation and integration of new frameworks and technologies
- Responsible and team-oriented work within agile development processes
- Taking technical responsibility for individual software modules

Professional Skills

- Studies in computer science, software engineering or similar degree
- Sound knowledge in software development with modern web frameworks and program libraries based on HTML5, JavaScript and CSS
- Experience in container solutions (e.g., Docker), (No) SQL databases, and interface technologies (e.g., SOAP, REST)
- Practical experience with cloud-based PaaS and SaaS (especially Azure and AWS)
- A high level of team spirit and personal responsibility
- Willingness to familiarize yourself with new areas of responsibility
- Good German and English skills

Extent

Full-Time/Part-Time
